Introduction

Real Estate Management encompasses the strategic administration of properties, focusing on maintaining optimal operational efficiency, ensuring high standards of upkeep, and maximizing profitability in today's ever-evolving market.

Objective

To develop an efficient real estate management system that streamlines property listing, enhances property discovery for buyers, ensures secure transactions, and provides value-added services for a seamless real estate experience.

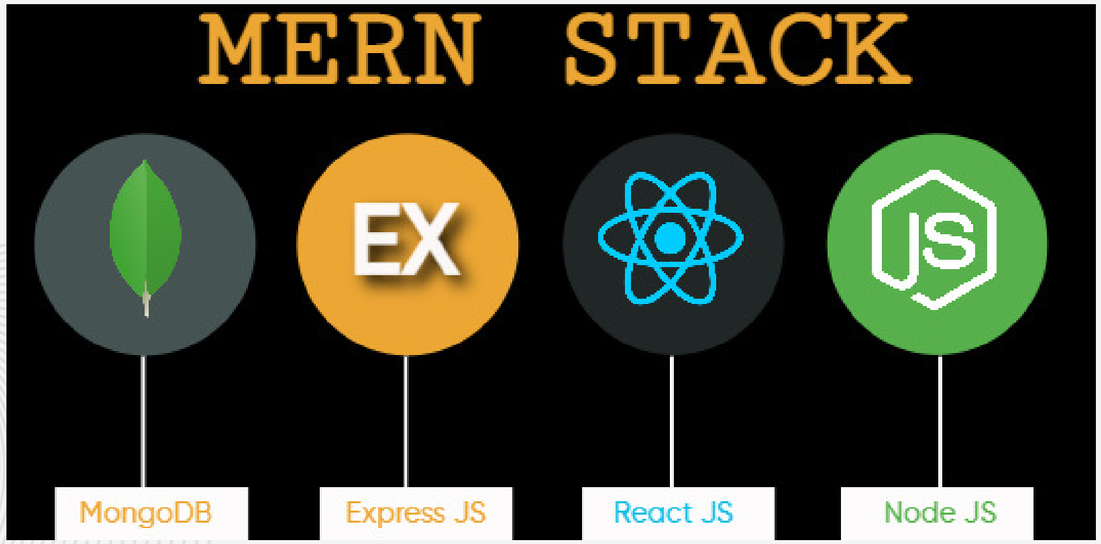

Tech Stack

Backend: MERN Stack (MongoDB, Express.js, React.js, Node.js)

Frontend: Tailwind CSS for responsive and modern UI

Database: MongoDB for flexible data storage

Key Features

- Property Management
- Customer Management
- Transaction Management
- Real Estate Concierge

Property Management

Chathuri M.T.K
IT22548078

CRUD Operations

Create	Add property listings with comprehensive details, including title,description, type, location, pricing, images, and additional features.
Read	Display all available properties with complete information for both registered or unregistered clients.
Update	Modify property details such as pricing, availability, and images to ensure accuracy.
Delete	Remove property listings once they are sold or no longer available.

Search Functionality

Enable buyers to search properties by location, price range, and property type.

Report Generation

- Generate reports for effective property data management.
- Download report in PDF.

Validations

User Type Access

- Both registered and unregistered customers can view property details but sensitive data (e.g., seller contact) is restricted for unregistered users.

Property Details

- Property Title and Description must not be empty, meet the required character length.
- Location must be selected from a predefined list.
- Property Type must be either "Sale" or "Rental." Cannot be empty.
- Regular Price must be numeric and greater than 0 and Discount Price must be less than or equal to the regular price.
- Images must upload in valid formats.

Buyer and Seller Management

Dissanayaka D R
IT22207654

The Customer Management Dashboard handles client data, application processing, and interactions, enabling tenant screening, property matching, digital documentation and financial checks through efficient Create, Read, Update, and Delete (CRUD) operations
